COR®FACE 92B FC

DESCRIPTION
COR™FACE 92B FC is a metal-cored, hardfacing alloy designed to resist severe abrasion. This iron base alloy’s abrasion resistance is attributable to its optimum microstructure, which hosts chromium carbides and boron carbides. The wire can be used with or without a shielding gas. The weld beads cross-check to relieve stress similar to other high carbon high chrome alloys.

APPLICATIONS
92B FC is typically used in severe abrasion combined with mild impact applications such as earth moving, crushing, drilling and grinding equipment.

PROCEDURE
Hardfacing generally does not require any heat treatment. Preheat and post heat according to the base material where necessary. The weld deposit will cross check every 3/8” to 3/4”. Two layers is sufficient for most applications. If more than two layers are needed the base should be built up with COR™FACE 9250.

WELDING PARAMETERS

<table>
<thead>
<tr>
<th>Size</th>
<th>Volts</th>
<th>Amps</th>
<th>Stickout</th>
</tr>
</thead>
<tbody>
<tr>
<td>FC-O 0.045”</td>
<td>20-23</td>
<td>120-200</td>
<td>1”</td>
</tr>
<tr>
<td>FC-O 1/16”</td>
<td>24-26</td>
<td>200-310</td>
<td>1.25”</td>

<tr>
<td>FC-O 3/32”</td>
<td>27-29</td>
<td>280-380</td>
<td>1.50”</td>
</tr>
</tbody>
</table>

Optional shielding gases such as CO₂ or Ar- CO₂ may be used. When a shielding gas is used reduce the Stickout to ½” to ¾” and the voltage range can be from 18-30.

MECHANICAL PROPERTIES
Hardness: 60-65 Rc

CLASSIFICATION
Chromium-Carbide, Boron-Carbide, Iron base hardfacing alloy
